#### Brief instructions for g77 Fortran Compiler for Windows

- Place g77exe.zip , g77lib.zip , g77doc.zip , and unzip.exe in any Windows folder/directory (say, mydirectory).
- Open a MSDOS console (the classical black MS-DOS) windows and make successive cd 's until you are in mydirectory.
- Following instruction : unzip g77exe.zip
- Following instruction : unzip g77lib.zip
- If you wish the full documentation: following instruction : unzip g77doc.zip
- If you wish, now you can delete the zip files: del \*.zip
- In mydirectory, you will see a new subdirectory named G77. Move this directory so that it hangs in your hard disk root directory (C:\)
- Change directory until you are in C:\G77
- Following instruction : g77setup.bat
- Now you can proceed compiling. There are two test files. Try :  
G77 -O2 -fno-automatic mytest1.f There will be no error messages
- Place your source files in in C:\G77 and compile within this directory
- Every time you start a session on C:\G77, issue the command : g77setup.bat
